FINAL REVISED CLOSURE CERTIFICATION REPORT, IRP SITE 7, FORMER SLUDGE DRYING BEDS, NORTON AIR FORCE BASE

Dear Mr. Solander:

The Department of Toxic Substances Control (DTSC) received the above referenced document dated December 16, 2005. This report documents the removal of the concrete containment walls for the 12 former sludge drying beds and associated polynuclear aromatic hydrocarbon (PAH) contaminated soil. The removal activities were conducted in December 2003. A total of 113 cubic yards of concrete and 405 cubic yards of soil were excavated and disposed of. Confirmation sampling results indicate that after the removal action, the site yields approximately 2×10^{-6} of excess cancer risk. The Air Force proposes to close Site 7 under the Comprehensive Environmental Response, Compensation, and Liability Act program with no further action required.

DTSC concurs with the conclusion and has no other comments to the report. This concurrence does not constitute the termination of corrective actions under Resource Conservation and Recovery Act. If you have any questions regarding this letter, please contact either Mr. Manny Alonzo at (714) 484-5425 or Mr. Stephen Niou at (714) 484-5458.

Sincerely,

John Scandura, Chief
Office of Military Facilities
Southern California Operations Branch
